EDUCATION

Northeastern University

Boston, MA

Master's Degree in Applied Artificial Intelligence

Expected May 2027

- GPA: 4.0/4.0
- Graduate coursework: Applied Machine Learning, Applied Artificial Intelligence, Natural Language Processing, and Research Writing.

The American University in Cairo

Cairo, Egypt

B.Sc. in Computer Science

Dec. 2023

- Relevant coursework: Algorithms, Deep Learning, Operating Systems, Computer Networks, Software Engineering, Programming Languages, Digital Forensics, and Fundamentals of Simulation.
- Thesis: Ensemble-Based Network Intrusion Detection System using machine learning and deep learning models.

PROFESSIONAL EXPERIENCE

State Street – Charles River Development

Boston, MA

IT Delivery Project Management

Jul. 2026 – Present

- Coordinate technology delivery across business, engineering, QA, and operations teams supporting financial-services platforms, tracking milestones, dependencies, risks, controls, and release readiness.
- Analyze configuration differences between production and test environments, document required changes, and support validation activities to improve deployment accuracy and operational resilience.
- Maintain Jira workflows, project plans, status reporting, and governance documentation to provide visibility into risks, decisions, and cross-functional action items.

Microsoft

Hybrid, Egypt

Product Manager

Feb. 2024 – Aug. 2025

- Led cross-functional product initiatives across Skype and Microsoft Clarity, partnering with engineering, design, analytics, and compliance teams.
- Ran A/B experiments and analyzed onboarding funnels using SQL, Kusto Query Language, and Power BI, increasing engagement by 10% and setup completion by 7%.
- Supported Skype advertising experiments that generated approximately \$300K in incremental revenue through privacy-conscious monetization features.
- Launched automated onboarding for the Microsoft Clarity WordPress plugin, increasing activation by 10% and reducing support escalations by 16%.
- Used churn analysis and competitive research to inform product roadmaps, retention initiatives, and feature prioritization while managing Agile delivery across multiple releases.

Wasla Browser

Cairo, Egypt

Junior Product Owner

Jun. 2023 – Nov. 2023

- Led buy-now-pay-later feature delivery and streamlined key user flows, increasing checkout completion by 13% and reducing drop-off by 5%.
- Managed sprint planning, backlog grooming, feature prioritization, and secure transaction and repayment requirements for Bravo Wallet.

Product Intern

Jan. 2023 – Mar. 2023

- Maintained the Jira backlog, drafted user stories, and supported Agile planning and cross-functional feature delivery.

Nexus Analytica

Cairo, Egypt

App Developer Intern

Feb. 2021 – Mar. 2021

- Developed Flutter-based assessment prototypes and implemented user flows, UI components, and state management for behavioral and cognitive data collection.

Research Intern

Jan. 2021 – Feb. 2021

- Organized research datasets, conducted quantitative analysis using Python and spreadsheets, and reviewed literature on behavioral and cognitive indicators.

RESEARCH EXPERIENCE

Human-Centered AI Lab, Northeastern University

Boston, MA

Research Assistant

Dec. 2025 – Present

- Conduct research with Prof. Dakuo Wang's Human-Centered AI Lab on human-AI interaction, AI-agent evaluation, adaptive learning, and the responsible deployment of AI-driven systems.
- Lead quantitative analysis for a CMU and U.S. Bank collaboration evaluating AI-driven quest personalization in a live Roblox financial literacy game.
- Analyze randomized experimental data using regression, interaction, subgroup, and robustness analyses to evaluate engagement, assessment performance, and Bayesian Knowledge Tracing-derived skill outcomes.
- Conduct qualitative coding and thematic analysis of UX research data to identify patterns in participant behavior, trust, decision-making, and perceptions of AI-agent systems.

RESEARCH & PUBLICATIONS IN PROGRESS

Adaptive Learning in the Wild: A Randomized Trial of AI-Driven Quest Selection on Roblox

First Author | Manuscript in Progress

- Evaluate a live randomized trial comparing fixed quest sequencing with Bayesian Knowledge Tracing-based personalization across engagement, assessment performance, skill change, motivation, and reward-participation outcomes.

UXAgent: Simulating Usability Testing of Web Design with LLM Agents as Participants

Co-Author | Manuscript in Progress

- Contribute qualitative coding and thematic analysis to research on an LLM-agent system that allows UX researchers to dry-run usability studies with simulated participants interacting with live websites.

ACADEMIC PROJECTS

Ensemble-Based Network Intrusion Detection System | *Undergraduate Thesis, 2023*

- Engineered a network intrusion detection system using ensemble machine learning and deep learning classifiers, improving detection accuracy by 25%.
- Directed project milestones and co-authored a paper contributing machine-learning-based network intrusion detection strategies.

Doctory – Healthcare Management System | *2022*

- Developed backend and frontend components using Node.js, Flutter, and MySQL.
- Designed RESTful APIs for managing patient records, appointments, and user roles.

TECHNICAL SKILLS

Languages: Python, SQL, C++, C, Rust, HTML/CSS

Data and AI: Pandas, NumPy, Matplotlib, TensorFlow, PyTorch, statistical analysis, experimental design

Product and Analytics: Jira, Power BI, Kusto Query Language, A/B testing, roadmap development, Agile delivery

Development Tools: FastAPI, Django, React, Flutter, Git, Docker, Postman

Research Methods: Randomized experiments, regression analysis, qualitative coding, thematic analysis

LEADERSHIP & ACTIVITIES

Vice President, CSE Association – AUC

Jun. 2022 – Jun. 2023

- Coached Egypt's RoboCup team to first place in a national competition and led more than five technical workshops and ECPC training sessions.
- Secured more than \$20,000 in sponsorships from Dell, Siemens, and the AUC School of Sciences and Engineering to support student innovation.
