PROFESSIONAL SUMMARY

Technical product and delivery professional with experience supporting software launches across financial services, consumer technology, and AI research. Skilled in launch readiness, cross-functional execution, performance analysis, risk tracking, backlog prioritization, testing, technical documentation, and translating operational findings into product improvements.

EDUCATION

Northeastern University

Boston, MA

Master's Degree in Applied Artificial Intelligence

Expected May 2027

- GPA: 4.0/4.0
- Graduate coursework: Applied Machine Learning, Applied Artificial Intelligence, Natural Language Processing, and Research Writing.

The American University in Cairo

Cairo, Egypt

B.Sc. in Computer Science

Dec. 2023

- Coursework included Algorithms, Deep Learning, Operating Systems, Computer Networks, Software Engineering, Programming Languages, Digital Forensics, and Fundamentals of Simulation.
- Thesis: Ensemble-Based Network Intrusion Detection System using machine learning and deep learning models.

PROFESSIONAL EXPERIENCE

State Street – Charles River Development

Boston, MA

IT Delivery Project Management

Jul. 2026 – Present

- Support end-to-end technology delivery across business, engineering, QA, and operations teams, tracking launch milestones, dependencies, risks, controls, and readiness requirements.
- Compare production and test environment configurations, document gaps, and coordinate validation activities to improve deployment accuracy and operational readiness.
- Maintain Jira workflows, launch trackers, status reports, decision logs, and governance documentation while escalating blockers and coordinating cross-functional action items.
- Translate technical findings and environment differences into clear documentation for business and technical stakeholders.

Microsoft

Hybrid, Egypt

Product Manager

Feb. 2024 – Aug. 2025

- Supported product launches across Skype and Microsoft Clarity, coordinating engineering, design, analytics, compliance, and business stakeholders from planning through post-launch evaluation.
- Monitored onboarding and product-performance metrics using SQL, Kusto Query Language, and Power BI, identifying failure points and prioritizing improvements that increased engagement by 10% and setup completion by 7%.
- Launched automated onboarding for the Microsoft Clarity WordPress plugin, increasing activation by 10% and reducing support escalations by 16%.
- Managed product backlogs, sprint planning, bug triage, release dependencies, and launch risks across multiple Agile releases.
- Used experiment results, customer behavior, churn analysis, and competitive research to inform product roadmaps and prioritized feature improvements.

Wasla Browser

Cairo, Egypt

Junior Product Owner

Jun. 2023 – Nov. 2023

- Supported the launch of buy-now-pay-later capabilities, coordinating product requirements and user-flow improvements that increased checkout completion by 13% and reduced drop-off by 5%.
- Managed backlog prioritization, sprint planning, acceptance requirements, and transaction and repayment workflows for Bravo Wallet.

Product Intern

Jan. 2023 – Mar. 2023

- Maintained Jira workflows, drafted user stories, documented product requirements, and supported cross-functional feature delivery.

Nexus Analytica

Cairo, Egypt

App Developer Intern

Feb. 2021 – Mar. 2021

- Developed Flutter-based assessment prototypes and implemented user flows, interface components, and data-collection functionality.

Research Intern

Jan. 2021 – Feb. 2021

- Organized research datasets, conducted quantitative analysis using Python and spreadsheets, and summarized technical findings.

RESEARCH EXPERIENCE

Human-Centered AI Lab, Northeastern University

Boston, MA

Research Assistant

Dec. 2025 – Present

- Lead analysis of a randomized field study evaluating an AI-driven adaptive learning system deployed in a live Roblox environment.
- Validate experimental data and analyze engagement, assessment performance, and skill progression using Python, regression models, interaction analyses, and robustness checks.
- Identify adoption and performance patterns across user groups and translate findings into recommendations for product design, personalization, and deployment strategy.
- Conduct qualitative coding and thematic analysis of UX research data to identify usability concerns, trust patterns, and improvement opportunities for AI-agent systems.

TECHNICAL SKILLS

Product Launch and Delivery: Launch readiness, risk and dependency tracking, backlog prioritization, sprint planning, bug triage, status reporting, stakeholder communication, process documentation

Analytics: SQL, Kusto Query Language, Power BI, Python, Pandas, NumPy, A/B testing, regression analysis, performance monitoring

Technical Tools: Jira, Git, Docker, Postman, FastAPI, Django, React, Flutter

Research Methods: Randomized field experiments, quantitative analysis, qualitative coding, thematic analysis

RESEARCH & PUBLICATIONS

Adaptive Learning in the Wild: A Randomized Trial of AI-Driven Quest Selection on Roblox

First Author | Submitted to KDD 2027

- Evaluate a live randomized trial comparing fixed quest sequencing with Bayesian Knowledge Tracing-based personalization across engagement, assessment performance, skill change, motivation, and reward-participation outcomes.

UXAgent: Simulating Usability Testing of Web Design with LLM Agents as Participants

Co-Author | Manuscript in Progress

- Contribute qualitative coding and thematic analysis to research on an LLM-agent system that allows UX researchers to dry-run usability studies with simulated participants interacting with live websites.

LEADERSHIP & ACTIVITIES

Vice President, CSE Association – AUC

Jun. 2022 – Jun. 2023

- Developed and delivered more than five technical workshops and ECPC training sessions for students with varied levels of technical experience.
- Coached Egypt's RoboCup team to first place in a national competition and coordinated technical preparation and team execution.
- Secured more than \$20,000 in sponsorships from Dell, Siemens, and the AUC School of Sciences and Engineering.

ACADEMIC PROJECTS

Ensemble-Based Network Intrusion Detection System | *Undergraduate Thesis, 2023*

- Engineered a network intrusion detection system using ensemble machine learning and deep learning classifiers, improving detection accuracy by 25%.
- Directed project milestones and co-authored a paper contributing machine-learning-based network intrusion detection strategies.

Doctory – Healthcare Management System | *2022*

- Developed backend and frontend components using Node.js, Flutter, and MySQL.
- Designed RESTful APIs for managing patient records, appointments, and user roles.
